EDUCATION

2026

Java Development Bootcamp

neuefische GmbH — School and Pool for Digital Talent

2019

B.Sc. International Media and Computing

Hochschule für Technik und Wirtschaft Berlin

Fullstack Engineer with 5+ years building production web applications across startups and agencies in Berlin. At Arbolitics, a German agrotech startup, I built interactive dashboards for irrigation planning and yield prediction, wiring up ML-based scoring APIs and shipping with full test coverage via Playwright and Jest. Before that, I spent close to four years at gravity&storm delivering full-stack products — from passenger information systems for German S-Bahn trains to booking tools and configurators — across React, Vue.js, Next.js and Nest.js. I'm currently deepening my backend fundamentals through an intensive Java & Spring Boot bootcamp at neuefische.

EXPERIENCE

Frontend Engineer — Arbolitics

Berlin, Germany · Hybrid

Mar 2025 – Nov 2025

- Built interactive dashboards and tools for irrigation planning, yield prediction, and farm scoring, powered by weather, soil health, and satellite data.
- Implemented Zustand for persistent data flow and clear state management.
- Integrated Auth.js for secure authentication and session handling.
- Collaborated with backend and data engineers to connect machine-learning-based APIs for productivity and yield scoring.
- Ensured app reliability with Playwright E2E tests and Jest unit/integration tests.
- Contributed to Leaflet-based map visualizations showing field boundaries and performance insights.

Impact: Delivered a smooth, data-rich user experience that turns complex farm data into clear insights for better agricultural and financial decisions.

Full Stack Engineer — gravity&storm

Berlin, Germany

Sep 2020 – Jun 2024

- Developed passenger information systems for S-Bahn trains across Germany with Vue.js & Nest.js.
- Created a Next.js-based dispatcher web application for coordinating city tour guides.
- Built a collaborative audio application for the web using React.
- Engineered a React-based configurator for a photo-frame company.
- Built a website with a React frontend and Drupal backend for a metrology company.

Frontend Web Developer — HeavenHR

Berlin, Germany · Work Study

Mar 2019 – Mar 2020

- Worked on the frontend with React.js and AJAX-driven data fetching.

Augmented Reality Developer — Bachelor Thesis —

Oct 2018 – Feb 2019

Vonderlabs

Berlin Area · Work Study

- Researched and built an AR gamification project as part of the bachelor thesis.

Virtual Reality Development Intern — Vonderlabs

Mar 2018 – Aug 2018

Berlin Area · Internship

- Prototyped virtual reality experiences and tooling.

Virtual Reality Developer — University Project — HTW

Apr 2017 – Aug 2017

Berlin, in collaboration with ImmobilienScout24

Berlin Metropolitan Area · Course Project

- Built a virtual reality property tour as a university course project set by ImmobilienScout24, not a role held at the company.
